Patras, July 19th 2013

Dear Sir/Madam,

I am writing to support the Medline application of the *Translational Medicine*.

I am a member of the editorial board since the launch of this journal and in every occasion I have found the whole publication process to be exemplary from submission to acceptance: the rapid turnaround of my articles, the comprehensive and constructive peer review process and the impressive production standards. In addition, my colleagues and I always appreciated the personal email contact with the Editor, which ensured that any queries could be solved quickly.

Translational Medicine covers hot topics in the ever-growing field of personalized medicine and is beginning to attract high-profile authors. This is also demonstrated by the gradual increase of the journal's impact. The journal as a whole is of a high standard and has the potential to become an essential read for everyone involved in the translation of 'omics into clinical practice, an essential part of 21st century medicine. Indexing on PubMed/Medline would allow the wealth of information to be more widely available to the many parties involved. Last, but not least, the entire editorial board and journal staff has worked very hard for the journal to establish its high professional standing.

For these reasons it is my pleasure to recommend *Translational Medicine* for indexing on Medline.

Sincerely

GEORGE P. PATRINOS, Ph.D.

ASSISTANT PROFESSOR of
PHARMACOGENOMICS

George P. Patrinos
Assistant Professor and Head,
Pharmacogenomics and Personalized Medicine group
